

RESTORING FACE CREAM

	❖ Peptide Cosmetics ❖ Reviline Pro ❖ Restoring face cream
	Vendor code: 60904
	<u>BUY RESTORING FACE CREAM</u>
Description	
Contains a physiologically active peptide complex epiphysis.	
Benefits:	
• regulates the synthesis of melatonin in the skin, • has antioxidant purpose, • improves texture and skin color, • slow down the aging process, • stimulates metabolism of the skin cells, • restores natural skin regeneration, • eliminates the negative effects on the skin of unfavorable factors: air pollution, stress, sunlight, climate change, • restores the skin natural ability to retain moisture levels and pH, • activates the vitality and youthfulness of the skin.	
Ingredients	
Purified water, olive oil, cocoa butter, ethylhexyl cocoate, sorbitol, Capri-capric triglycerides, wax emulsion, stearin cosmetic monostearat glycerin, cyclomethicone, phenoxyethanol with ethylhexylglycerin, dimethicone, and benzizotiazolinon methylisothiazolinone, triethanolamine, citric acid, a complex of peptides epiphysis, perfume composition.	
Application method	
Morning and / or evening, apply with light massage movements to already cleansed face and neck.	
Main components	

Epiphysis peptides

Peptides of epiphysis - regulate the metabolism and increase protein synthesis in skin cells. they have high antioxidant activity level, normalize lipid peroxidation in the skin, which helps to eliminate negative effects on the outer layer of the skin (air pollution, increased solar radiation, intense physical activity, injuries) and internal (emotional stress) adverse factors, resulting in activation of metabolic processes in tissues and acceleration of the recovery.

Microcare SI

Microcare SI - a unique combination of active ingredients, the liquid product has high transparency and broad-spectrum activity against bacteria, yeasts and molds in personal care products.

Chemical Identification

Active ingredients:

- 1,2-benzisothiazolin-3-one
- 2-methyl-4-isothiazolin-3-one

INCI:

- Benzisothiazolinone (and)
- Methylisothiazolinone

Toxicology

Active components of Microcare SI show a very low toxicity. Numerous of studies have shown that sensitization of potential products is much lower compared with the previously used isothiazolinones mixtures. Allergic reactions after sensitization are also different from other isothiazolinones.

Form release:

50 ml

Production

Scientific and Production Center of Revitalization and Health

St. Petersburg University of Bioregulation and Gerontology
