

CREAM-BALM FOR EYELASHES PEPTIDE LASHES®

	❖ Decorative Peptide Cosmetics ❖ Cream-balm for Eyelashes ❖ PEPTIDE LASHES® Vendor code: 61003 <u>BUY CREAM-BALM FOR EYELASHES</u>
Description	
Cream-balm for eyelashes nourishes and strengthens the roots of eyelashes, restores their structure and color, stimulates their growth and improves the appearance. Cream-balm for eyelashes perfect care weakened lashes, return them density and thickness, will give a healthy glow. Cream-balm for eyelashes has a protective effect, gives shape to the eyelashes, making the eyes look more vivid and expressive. It comprises peptides cartilage and thymus.	
Purpose:	
• contributes to the strengthening and growth of eyelashes, • protects against environmental influences, • stimulates the growth of eyelashes.	
Ingredients	
Purified water, extract series, castor oil, cyclopentasiloxane and polypropylene silsesquioxane, candelilla wax, copolymer of polyvinylpyrrolidone and vinyl acetate, propylene, bioantioksidantny complex "Neovitin"®, sorbitanizostearat, hydrogenated castor oil, ceresin, beeswax, cetyl alcohol, magnesium aluminum silicate, PEG -40 hydrogenated castor oil, carnauba wax, stearin, Polidon hydrolyzed lupine protein, wheat protein extract natural gliadin, triethanolamine, phenoxyethanol, ethylhexylglycerin to, hydroxyethylcellulose, citric acid, complexes of peptide A-4, A-6.	
Application method:	

Apply evenly throughout the length of the eyelashes from the base to the tips of the lungs tighten movements. In the case of contact with eyes, rinse with water.

Main components

Neovitin

Bio-antioxidant complex Neovitin comes from original technology of the cultivated strains of biotechnological method from the ginseng biomass. The new technology allows achieving the most complete extraction of the complex without losing its antioxidant activity. Bio-antioxidant complex Neovitin is anti-inflammatory and has immune stimulatory effects. Synergistic effect of the active components of the complex leads to the production of antioxidant enzymes in the body and interferon, which inhibit the reaction of peroxide oxidation (destruction) of lipid cell membranes of blood vessels whilst strengthening them, and thereby increasing the resistance of the body. Neovitin controls the formation and leads to the physiological formation of the main instigators of premature aging - free radicals, which are developed of throughout human organism life. It is also the main agent to neutralize free radicals. The complex is stable during its storage period and has a high, penetrating ability through the epidermis, dermis and mucous membrane. It has been proved: Neovitin has anti-inflammatory and regenerative effects, which result in its widest application in anti-aging skin and health care products and oral care. The unique properties of Neovitin have been confirmed by 11 patents and awarded gold medals RANS with the name of II Mechnikov "For a practical contribution of improving the health of the nation" and Paul Ehrlich of the European Commission for Academic awards "for outstanding achievements in the field of social and predictive medicine".
