

MESOTEL - the basic product of revitalization

	❖ Mesotel internal ❖ Mesotel
	Vendor code: 60501
	BUY MESOTEL
Description	
Rejuvenating product based on choline. It is enriched with extracts of gotu kola and wolfberry. Mesotel has antioxidant effect, as well as antiviral and antimicrobial. It promotes excretion of salts of heavy metals and toxins, strengthens the immune system, and reduces the risk of cancer pathology. Mesotel improves cerebral blood circulation, the nervous system, normalizes metabolic processes in the body. Mesotel slows the aging process, stimulates cell regeneration, and improves the texture, moisture, elasticity and skin tone, smoothes wrinkles. Is the basic product of revitalization.	
Application method:	
Adults and children over 14 years old: 1 teaspoon (5.2 g) 1-2 times a day during meals. Course duration is 1 month. If necessary, the course can be repeated. Shake well before use.	
Ingredients	
Water, fructose, grapefruit juice concentrate, choline bitartrate, food additive "formula of beauty" (dry extracts of Gotu Kola and wolfberry), colloidal silver concentrate, sodium benzoate, potassium sorbate. Recommended as a source of choline, an additional source of silver, containing organic acids. 1-2 teaspoons (5.2 - 10.4 g) contain at least: • Choline - 52 - 104 mg, which is 10.4 - 20.8% *	

- organic acids - 62.4 - 124.8 mg, 12.5 - 25% *

* From an adequate level of consumption per day.

Recommended application:

- improves cerebral circulation,
- improves neuromuscular conduction,
- improvement of the CNS,
- prevention of stroke and stroke rehabilitation,
- as an antioxidant,
- increases immunity,
- prevention of aging,
- total body rejuvenation.

Main components

Choline

In nature, there are many substances that can significantly increase the energy potential of nerve cells, and hence the activity of the brain. All of these substances have in common one thing: in human body they are converted into acetylcholine and increase production to stimulate the central nervous system, ie, promotes more intensive intercellular nerve impulses.

These substances are the only officially registered and approved for domestic use in Russia followers of acetylcholine: Choline bitartrate - the main active component in the line of basic products for revitalization: Mesotel, Mesotel Beauty, Mesotel Neo.

The most remarkable effect of its application is the ability to improve memory and enhance cognitive (cognitive) function of the brain, which is largely dependent on the age-sharing acetylcholine in cells of the central nervous system. Thanks to its nature choline and its offspring are widely recognized around the world in nutriceology which fill up the shortage of acetylcholine, improve blood supply in the brain that helps to cope with high intellectual challenges to facilitate the learning process, increases the resistance of the brain of the extreme factors effects that increase the capacity for concentration.

The main purpose of nutriceology for healthy people – is to prevent disorders provoked by stress which lead to misbalance of the central nervous system. An important effect of substances with nutriceological purposes - regulation of the hypothalamus, which is responsible for the entire hormonal system.

A distinctive feature of choline and its derivatives is the ability of the cells to remove lipofuscin, ballast aging pigment, whose accumulation in the cells causes accelerated aging.

Thus, choline has a rejuvenating effect on the cellular level and it slows down the aging process. Regular studies of the effectiveness of acetylcholine precursors which are held for more than 35 years show that the recovery of the age of acetylcholine deficiency can increase life expectancy by 20-25%. In addition, choline is an inhibitor of free radicals.

Form release:

120 ml
