

REVILAB ML 03 - peptide preparation for the nervous system and eyes

	❖ Peptides ❖ Revilab peptides ❖ Revilab ML 03 – for the nervous system and eyes Vendor code: 61513 <u>BUY REVILAB ML 03</u>
Description	
Revilab Peptide ML — a line of anti-aging multifunctional preparations. Revilab Peptide ML is a multifunctional preparation of a new generation aimed at slowing down the aging processes, maintaining a normal level of metabolic processes, preventing various pathologies, rehabilitation after serious illnesses, the uniqueness of which lies in the principle of the all-in-one action. Effective action of Revilab Peptide ML is due to the high-tech formula: each of the 9 preparations contains a number of synthesized peptides that have a faster effect on various body systems, triggering the function of restoring internal organs, unique plant components that have powerful antioxidant and anti-age effects and vitamin complexes, They play an important role in maintaining the optimal functioning of immunity.	
Purpose:	
• inflammatory and degenerative diseases of the nervous system • for prevention of eye diseases, also with visual overstrain • for diseases of the retina • acute disorders of cerebral circulation (prevention and rehabilitation) • rehabilitation after head injuries	
Ingredients	
MCC (carrier), capsule (gelatin, HPMC, food grade titanium dioxide), choline bitartrate, lactose (filler), polyunsaturated fatty acids omega-3 (alpha-linoleic acid, contains carrier sorbitol and maltodextrin), tagetes extract (contains lutein and zeaxanthin), gematokokkus extract (contains astaxanthin), dextrose (carrier), peptide complex AA-5 (tripeptide consisting of L-glutamic acid, L-aspartic acid and L-arginine), peptide complex AA-6	

(tripeptide consisting of L-lysine and L-glutamic acid), calcium stearate (the flowing agent), silicon dioxide (the flowing agent), peptide complex AA-7 (tripeptide consisting of L-lysine, L-glutamic and L-aspartic acid), thiamine hydrochloride (vitamin B1), riboflavin hydrochloride (vitamin B2), pyridoxine hydrochloride (vitamin B6).

Main components

- Peptide of brain (peptide complex AA-5)

It stimulates regeneration of neurons of the central nervous system. It normalizes cell metabolism and functions, and also restores the healthy function of nervous system.

- Peptide of amphiblastrodes (peptide complex AA-6)

It stimulates the retinal photoreceptors and cell elements. Peptide of amphiblastrodes helps to improve functional interaction of pigment epithelium and external segments of photoreceptors, and also accelerates the recovery of the light sensitivity of the retina. It normalizes vascular permeability; reduces the appearance of local inflammatory reaction; stimulates repair processes in diseases and injuries of the retina.

- Peptide of the vascular wall (peptide complex AA-7)

It regulates metabolic processes in the vascular wall. It can increase the elasticity of blood vessels and also can decrease the risk of damage to the vessel wall, bleeding and thrombogenicity. Peptide complex AA-7 improves blood circulation of organs and tissues.

- Astaxanthin

Is an antioxidant of amazing strength, 100 times more effective than vitamin E and 10 times more effective than beta-carotene. It protects our body from free radicals and glycation products of proteins. Has a restorative effect, slows down the aging process, increases immunity, improves vision, positively affects the health of the digestive tract (successfully used for dyspepsia, eradication of *Helicobacter pylori*), supports the cardiovascular system, increases efficiency and endurance. Has a special effect on the skin: reduces the number of wrinkles, increases the level of moisture and restores its elasticity.

- Choline

Choline is similar to the B vitamins. Humans can synthesize it in small amounts. Choline involves in transport of fats. It's a key component of lecithin. Choline deficiency results accumulation of fat in the liver, ultimately leading the liver damage (cirrhosis – end-stage liver disease). It's a precursor for acetylcholine; plays an important role for nervous activity and improves the activity of brain.

- Carotenoids

Lutein and zeaxanthin isolated from an extract of marigolds protect from the oxidative process of the lens of the eye, help maintain visual acuity. As antioxidants, they are able to neutralize free radicals that oxidize and damage the retina, prevent the development of cataracts, and serve as an excellent prophylaxis for age-related macular degeneration.

- Vitamin B1 (thiamine)

It supports the immune system. Basically, it provides the normal state of the mucous membranes, is involved in the formation of red blood cells and the metabolism of carbohydrates, the most efficient energy source for the organism. In addition, vitamin B1 (thiamine) optimizes cognitive activity and mental activity. He has a positive effect on energy, growth, normal appetite, ability to learn, it is necessary to maintain the muscle tone

of the intestine, stomach and heart.

- Vitamin B2

It is necessary for the formation of erythrocytes, antibodies, for the regulation of growth and reproductive functions in the body, it is necessary for the health of the skin, nails, hair growth and in general for the health of the whole organism, including thyroid function, assists the assimilation of iron, thereby preventing the development of anemia .

- Vitamin B6

Pyridoxine (vitamin B6) has a great impact on physical and mental health. It is required for normal functioning of the nervous system and brain, for the synthesis of nucleic acids.

- Polyunsaturated fatty acids Omega-3

Omega-3 - is polyunsaturated fatty acids (alpha-linolenic, eicosatrienoic, eicosapentaenoic acid and other). Reduces the content in the body of cholesterol, triglycerides and low-density lipoprotein, inhibit the development of atherosclerosis, cardiovascular and rheumatic diseases, thrombosis, and normalize metabolic processes.

Directions

Adults 1 tablet a day during mealtimes. Duration 4-6 weeks. If necessary, you can repeat. Possible re receptions throughout the year.

Form release:

30 capsules of 0,36 g.

Production

Scientific and Production Center of Revitalization and Health

St. Petersburg University of Bioregulation and Gerontology
