

REVILAB SL 09 - peptide preparation for the male reproductive system

	❖ Peptides ❖ Revilab peptides ❖ Revilab SL 09 ❖ Peptides of epiphysis, testicles, urinary bladder and prostate
	Vendor code: 61509
	BUY REVILAB SL 09
Description	
Peptide preparation for the male reproductive system. It contains synthesized peptides of epiphysis, testicles, urinary bladder and prostate.	
Purpose:	
• acraturessis • chronic prostatitis • benign prostatic hyperplasia • erectile dysfunction • increasing functional activity of men • normalization of male hormonal status • normalization of sperm motility	
Ingredients	
Purified water, chamomile extract, xylitol, PEG-40 hydrogenated castor oil, orange essential oil, taxifolin, licorice extract, propolis extract, peppermint extract, sodium saccharin, peptide complex AA-13, peptide complex AA-12, peptide complex AA-16, peptide complex AA-1, potassium sorbate, sodium benzoate, clove essential oil, natural flavor "Menthol", eugenol, limonene.	
Main components	
• Peptide of epiphysis (peptide complex AA-1) It has selective action on the gland cells, regulates the synthesis of melatonin and improves	

the function of the neuro-endocrine system.

- Peptide of urinary bladder (peptide complex AA-13)

It has biological activity which normalizes the urination, restores the metabolism in cells of urinary bladder wall, stimulate the muscle tone of detrusor and sphincter.

- Peptide of testicles (peptide complex AA-12)

It has selective action on cells of male reproductive system, increases the functional activity and sperm motility, and also regulates the hormonal balance.

- Peptide of prostate (peptide complex AA-16)

It has selective action on cells of prostate gland tissues and normalizes the cell metabolism of prostate.

- Extract of licorice

Has a wide range of substances useful to the human body. 27 flavonoids in the licorice have a versatile effect on the body — both spasmolytic, wound healing, and anti-inflammatory.

- Extract of propolis

Suppresses activity and kills bacteria and viruses, slows the growth of some of them. Propolis struggles with oral diseases caused by various types of infections, including herpetic, fungal, bacterial nature.

- Peppermint extract

Contains essential oil, flavonoids, tannins and bitter — these are the main active ingredients of this plant. The most important component in essential oil is menthol (up to 60%), which has an easy local anesthetic effect.

- Chamomile extract

Has a strong bactericidal, anti-inflammatory and soothing effect, and also stimulates blood circulation. These properties made chamomile an indispensable tool in the treatment of various inflammatory processes.

- Essential oil of orange

Used to care for the oral cavity. Oil fights inflammation and bleeding gums, treats stomatitis, helps with periodontitis.

- Carnation essential oil

Used to care for the oral cavity. Oil fights inflammation and bleeding gums, treats stomatitis, helps with periodontitis.

Directions

Drip 5–10 drops on the oral mucosa. Use 2 times a day. Check presence of natural sediment. Shake before use. Receiving duration: one month.

Form release:

10ml
